

Experiment 6: Sketch Sequence diagram for the project

Learning Objective: Students will able to draw Sequence diagram for the project

Tools: Dia, StarUML

Theory:

A sequence diagram shows, as parallel vertical lines (*lifelines*), different processes or objects that live simultaneously, and, as horizontal arrows, the messages exchanged between them, in the order in which they occur. This allows the specification of simple runtime scenarios in a graphical manner.

Sequence Diagram representation

Call Message: A message defines a particular communication between Lifelines of an Interaction.

Destroy Message: Destroy message is a kind of message that represents the request of destroying the lifecycle of target lifeline.

Lifeline: A lifeline represents an individual participant in the Interaction.

Recursive Message: Recursive message is a kind of message that represents the invocation of message of the same lifeline. Its target points to an activation on top of the activation where the message was invoked from.

Sequence Diagram: Example for ATM System startup

Sequence Diagram: Railway Ticket Booking System

- LO1: Identify the classes and objects.
 LO2: Identify the interactions between the objects
 LO3: Develop a sequence diagram for different scenarios

Outcomes: Upon completion of the course students will be able to draw the sequence diagram for the project.

Conclusion:

Viva Questions:

1. What is a sequence diagram?
2. What are advantages of sequence diagram?
3. What are entities in sequence diagram?
4. Explain its relation with the class diagram?
